## **Pilot Technician Grade I**

Candidate Name:

Date:

Demonstrates the ability to undertake routine fault-finding activities on hydraulic and mechanical systems This meets the requirements of IMCA R/RO3/000/05/05

(If applicable in assessment plan)	Activity Number (1,2, or 3):	1	
Performance Criteria  a) Can locate and use all system drawings prior to carrying out fault-finding activities  b) Plans the activity in a safe manner and obtains all necessary authorisations c) Identifies hazards that can arise during fault-finding procedures Demonstrates al logical approach to fault-finding and follows procedures for fault-finding on hydraulic systems glidentifies and inspects the correct test equipment for carrying out fault-finding activities hydraulic systems f) Calibrates test equipment, where appropriate, prior to carrying out fault-finding activities, e.g. pressure gauges and flow meters glidentifies and inspects and flow rates in the system components in a safe and accurate manner  Demonstrates the safe disposal of hydraulic oil when carrying out fault diagnosis on systems and consistently minimises any contamination  Records information and data collected during fault-finding activities in a logical manner which can then be interpreted by others  Witness name:  (If applicable in assessment plan)  Axxessor name:  Date:			
a) Can locate and use all system drawings prior to carrying out fault-finding activities b) Plans the activity in a safe manner and obtains all necessary authorisations c) Identifies hazards that can arise during fault-finding procedures Demonstrates a logical approach to fault-finding procedures for fault-finding on hydraulic systems Identifies and inspects the correct test equipment for carrying out fault-finding activities hydraulic systems f) Calibrates test equipment, where appropriate, prior to carrying out fault-finding activities, e.g. pressure gauges and flow meters g) Measures pressure and flow rates in the system components in a safe and accurate manner Demonstrates the safe disposal of hydraulic oil when carrying out fault diagnosis on systems and consistently minimises any contamination Records information and data collected during fault-finding activities in a logical manner which can then be interpreted by others  Witness name: (if applicable in assessment plan)  Witness name:  Date:	Type of Evidence: Observation (O),	Work Product (P), Written (W), Questioning (Q), Not Covered (N/C) or Not Applicable	(N/A)
b) Plans the activity in a safe manner and obtains all necessary authorisations c) Identifies hazards that can arise during fault-finding procedures Demonstrates a logical approach to fault-finding and follows procedures for fault-finding on hydraulic systems diddentifies and inspects the correct test equipment for carrying out fault-finding activities hydraulic systems  Calibrates test equipment, where appropriate, prior to carrying out fault-finding activities, e.g. pressure gauges and flow meters g) Measures pressure and flow rates in the system components in a safe and accurate manner  Demonstrates the safe disposal of hydraulic oil when carrying out fault diagnosis on systems and consistently minimises any contamination Records information and data collected during fault-finding activities in a logical manner which can then be interpreted by others  Witness name:  Witness name:  Witness name:  Date:		Type of Evidence	
b) Plans the activity in a safe manner and obtains all necessary authorisations c) Identifies hazards that can arise during fault-finding procedures Demonstrates a logical approach to fault-finding and follows procedures for fault-finding on hydraulic systems diddentifies and inspects the correct test equipment for carrying out fault-finding activities hydraulic systems  Calibrates test equipment, where appropriate, prior to carrying out fault-finding activities, e.g. pressure gauges and flow meters g) Measures pressure and flow rates in the system components in a safe and accurate manner  Demonstrates the safe disposal of hydraulic oil when carrying out fault diagnosis on systems and consistently minimises any contamination Records information and data collected during fault-finding activities in a logical manner which can then be interpreted by others  Witness name:  Witness name:  Witness name:  Date:	a) Can locate and use all syste	m drawings prior to carrying out fault-finding activities	
c) Identifies hazards that can arise during fault-finding procedures  Demonstrates a logical approach to fault-finding and follows procedures for fault-finding on hydraulic systems  e) systems  Calibrates test equipment, where appropriate, prior to carrying out fault-finding activities, e.g. pressure gauges and flow meters  Measures pressure and flow rates in the system components in a safe and accurate manner  Demonstrates the safe disposal of hydraulic oil when carrying out fault diagnosis on systems and consistently minimises any contamination  Records information and data collected during fault-finding activities in a logical manner which can then be interpreted by others  Witness name:  (If applicable in assessment plan)  Assessor name:  (If applicable in assessment plan)			
d) Demonstrates a logical approach to fault-finding and follows procedures for fault-finding on hydraulic systems   Identifies and inspects the correct test equipment for carrying out fault-finding activities hydraulic systems     Calibrates test equipment, where appropriate, prior to carrying out fault-finding activities, e.g. pressure gauge and flow meters     Measures pressure and flow rates in the system components in a safe and accurate manner     Demonstrates the safe disposal of hydraulic oil when carrying out fault diagnosis on systems and consistently minimises any contamination     Records information and data collected during fault-finding activities in a logical manner which can then be interpreted by others			
systems  f) Calibrates test equipment, where appropriate, prior to carrying out fault-finding activities, e.g. pressure gauges and flow meters  g) Measures pressure and flow rates in the system components in a safe and accurate manner  Demonstrates the safe disposal of hydraulic oil when carrying out fault diagnosis on systems and consistently minimises any contamination  Records information and data collected during fault-finding activities in a logical manner which can then be interpreted by others  Witness name:  (If applicable in assessment plan)  Assessor name:	Demonstrates a logical app		
gauges and flow meters  Measures pressure and flow rates in the system components in a safe and accurate manner  Demonstrates the safe disposal of hydraulic oil when carrying out fault diagnosis on systems and consistently minimises any contamination  Records information and data collected during fault-finding activities in a logical manner which can then be interpreted by others  Witness name:  (If applicable in assessment plan)  Assessor name:	e) I
